One of my favorite personal builds is Windows 8.1 Pro with the completely revamped Windows Server 2016, and getting the latest firmware and drivers to make sure it works correctly has never been more of a hassle. This problem is especially common with both Nvidia and AMD graphics cards as both of those manufacturers release their firmware every few months, and doing this manually for every update is just too much of a task. Thankfully, this time around Nvidia has given us a program that lets us do this in a much easier fashion. NVIDIA GeForce Update NVIDIA GeForce Update is a relatively new piece of software that allows you to update your NVIDIA GPUs without needing to manually download any files and install anything. Basically, you launch the program, tell it which of your NVIDIA graphics cards you want to check for updates and click the Check button, and then let it run in the background, checking and installing the newest drivers as it goes. From there, the program will occasionally update itself and you'll receive some kind of notification, showing you whether or not there are updates available and letting you know that they're installed. NVIDIA GeForce Update 2 in action The interesting thing about this software is that it's supposed to be a combined effort by NVIDIA and both AMD and Intel. While it seems to have only been developed to work with Nvidia cards for now, the system is supposed to be able to take advantage of both card types, which would mean that it's compatible with both AMD cards and Intel integrated graphics. Since the system is still in beta, AMD has yet to release any official statement about this. For now, you can still use it, but it's not available on any of the other manufacturer's websites. After using NVIDIA GeForce Update I highly recommend that you run the app and update your NVIDIA graphics drivers as well. Release date for NVIDIA GeForce Update You can get the latest NVIDIA GeForce Update in this month's Free version of Windows 10. It's built into Windows 10 Pro with the November Update, and you can get it as a standalone program on Windows 10 Home and Windows 10 Mobile. More details on NVIDIA GeForce

Based on my extensive experience with these devices and their drivers, I developed EnvyUpdate. In some cases, it's simply not enough to just reboot the machine or check Windows Updates to get the graphics card drivers updated to the latest version. If you're worried that your graphics card drivers are no longer being maintained or don't support the latest GPU features, EnvyUpdate will let you know right away. EnvyUpdate detects the installed graphics card drivers. Then, it checks the internet for updates to these drivers. If any updates are found, EnvyUpdate will download them and install them on your machine.
