COMPATIBLE WITH ANY MEDIA PLAYER (FREE DOWNLOAD) The TTA Lossless Audio Codec Free Download is compatible with any audio player that supports the "standard" Microsoft wav file format. TTA Lossless Audio Codec DVD-R SPECS: Write up to 20 audio CDs on a single DVD-R disc Supports ID3v1 and ID3v2 tags for the storage of up to 160-character text information in the metadata The TTA Lossless Audio Codec was written using C and cross-compiled to work on most UNIX platforms, with Mac OS and Windows support Major Features: Compresses WAV files to a size that can be compressed with no data loss into an existing DVD-R media format - for example, the typical CD audio CD-ROM format. Read back the audio data of the compressed WAV file and play it back in a lossless audio format - for example, the WAV format. Extendible in the future if more media data formats are supported by TTA Lossless Audio Codec. Compatible with WAV audio files of any type of format and sample rate. Can compress mono or stereo WAV files (audio channel length of 1 channel) to one audio track of the DVD-R disk - for example, mono-WAV to mono-WAV Can compress 24-bit, 32-bit, and floating-point WAV audio files to one CD-quality audio track of the DVD-R disk. Can compress audio files without altering the original. Supports audio files encoded in WMA, MP3, OGG, AAC, AIFF, MIDI, VOC, DTS, MP4 and FLAC formats. Supports ID3v1 and ID3v2 tags for the storage of up to 160-character text information in the metadata. Supports the ID3v1 and ID3v2 tags for the storage of up to 160-character text information in the metadata, as well as for the storage of the WAV audio files and the desired compression ratio. Does not alter the audio data of the original WAV files. Supports multimedia content; the "PCM" audio samples are of WAV format. Supports time-based and frame-based rate controls for the TTA lossless compressed WAV audio files. Supports

Known bugs: - is a proof-of-concept and not intended for production. - currently only supports WAV files. - depending on music type, it may or may not be able to compress to acceptable levels. - only supports stereo and mono channel input. - no ID3 tag support. Win 32 Description: The TTA Lossless Audio Codec is a free, simple, realtime lossless audio compressor that is also based on adaptive prognostic filters and has compared favorably to a majority of its popular open-source peers. TTA Lossless Audio Codec was built to offer adequate compression levels while maintaining high operation speeds. The codec was built to offer adequate compression levels while maintaining high operation speeds. The TTA lossless audio codec performs lossless compression on multichannel 8, 16 and 24-bit data of WAV audio files. The term "lossless" refers to the fact that such compression results in literally no data or quality loss; when decompressed, the audio file data are bit-identical to those of their originals. Compression ratios achieved by the TTA codec vary, depending on music type, but range from 30% - 70% of the original. The TTA lossless compressed audio format supports both ID3v1 and ID3v2 information tags. The TTA lossless audio codec allows for the storage of up to 20 audio CDs worth of music on a single DVD-R, retaining the original CD quality audio, plus detailed information in the popular ID3 tag format. Being 'lossless' means that no data/quality is lost in the compression - when uncompressed, the data will be identical to the original. WavPack Audio Compressor Version 2.30 Description: TTA Lossless Audio Codec Version 0.2.0 - 8-31-2003 - R.
