Stream your media to your mobile devices Make any media file available to your mobile devices Make your mobile devices available to your media files Unlock all the features of your mobile devices Unreal Media Server is an advanced media server that allows you to: Stream your media to any mobile device without limitations Provide any audio or video file that is stored on your PC to your mobile devices Stream your media to any mobile device without limitations Broadcast your media with a plethora of mobile devices This application allows you to stream your media files to a broad range of mobile devices, without the need for any software or hardware alterations on your part. With this app, you can: Stream media from your PC Stream media from your PC to your mobile devices Stream any audio or video file stored on your PC to your mobile devices Broadcast any audio or video file stored on your PC to a multitude of mobile devices The only restriction in using Unreal Media Server is the lack of limitations in streaming your media files to any mobile device. Therefore, this application lets you provide any multimedia file from your PC to your mobile devices, just by adding it to a playlist. Easy setup Simply type the address of the media file that you want to stream to your mobile devices and press the "Play" button. You can then open this address in any video player of your choice, or play the file directly from your smartphone's browser, like from Safari or Chrome. This approach can provide you with a more "intuitive" user experience, since you do not need to add any extra software or hardware, and you can easily stream your media files to your mobile devices. Broadcast your media Unreal Media Server lets you broadcast any file stored on your PC to your mobile devices, without limitations. All you have to do is adding the address of the file to a playlist, and then open it in a video player of your choice. Convenience for mobile devices This application allows you to stream your media files to any mobile device that supports Flash Player, even if it is using the Android OS. It also enables you to stream any video files directly from your smartphone's browser, regardless of the Android or iOS device that is used. Features: Multiple streaming protocols support Wide range of supported formats: MKV, MP4, AVI, ASF, MPEG, OGG, FLV

Send To supports the sending of files (as “media messages”) and files to any folder on any device. The easiest way to get files to your mobile device, tablet or laptop is to use the Send To application. The program is available for Windows mobile phones as well as tablets, notebooks and desktops. Send To supports a broad range of devices, such as Windows mobile phones, Windows mobile tablets and desktops, Apple iPhones, Android handsets, Windows-based mobile phones, notebooks, tablets, media players and more. Among the other great things about this application are the user-friendly functions it offers, its relatively small size and the fact that it works perfectly on all supported devices, no matter whether they belong to a different platform or have a different version. Send To keeps the functional options of the Windows file sharer in place and offers a few extras. You can share files via Internet, Bluetooth and Wi-Fi, send pictures via Email and SMS, or even synchronize your data on your device with the server. Furthermore, Send To can save your data locally. You can send files to any folder on any device with Send To. Your files are converted to media messages, which can be shared via Facebook, Twitter, email and SMS. Send To supports Dropbox, Google Drive and OneDrive. Synchronize your data with the server. Send pictures via Email and SMS. Send To keeps the functional options of the Windows file sharer in place and offers a few extras. By using Send To, you can share files, save them, or even synchronize your data with the server. You can also synchronize your data with the server. This program is compatible with the following smartphones, tablets and laptops: Windows mobile phones, Windows mobile tablets, Apple iPhones, Android handsets, Windows-based mobile phones, notebooks, tablets, media players and more. The Send To application supports the sharing of files via Internet, Bluetooth and Wi-Fi, as well as the synchronizing of data with the server. You can also send pictures via Email and SMS. Send To keeps the functional options of the Windows file sharer in place and offers a few extras. You can share files via Internet, Bluetooth and Wi-Fi, send pictures via Email and SMS, or even synchronize your data on your device with the server. To conclude, this is a simple and useful application, which is compatible with a broad

What's New in the Unreal Media Server?

Myke (more...@mail.ru) is an IT-Researcher, Lecturer and Visualized Media Artist (Video-Game Creator). As he is a proud owner of a GeForce GTX-1060 and an EVGA B450 Tomahawk, he likes to work with Ubuntu on all three machines.
