Leawo today announced the release of Flex & Xcode and Leawo Developer Studio for iPad & iPhone. The software is designed for developers wanting to create mobile applications. Flex and Xcode allow iPad and iPhone developers to easily create applications with the three essential components of mobile development – code, UI, and Flash. The Leawo Developer Studio for iPad and iPhone includes all the necessary tools to create an interactive Flash-based application with a native iOS interface. A new set of collection samples, including the common Flex and MXML components, is also included in the kit. Developers can also take advantage of the new iOS SDK for iPhone & iPod Touch to create and deploy native iPhone and iPad applications. While the Leawo Developer Studio for iPad and iPhone comes with all the tools to make iOS development easier, it is still priced at \$59.99 USD and offers less features than its Flex & Xcode software version, which is \$79.99 USD. However, it is a good alternative for those who want to start learning iOS. Besides the software

Monitor Subversion repositories for new commits in real time with no negative impact on your resources. Detect projects in Subversion repositories and automatically add them to the database. Select projects to monitor, set their properties, and edit notifications. Add excluded users and/or projects for automatic checking. Create exclusion and inclusion lists with users. Optional filters can be applied by selecting columns in the database. View the last log message for each repository and the most recent changes. Exclude ignored revisions and users from new project detection. Optimized script language to control all tasks. Integrated connection to the Subversion server. Portable version for immediate download. For developers, committed to the Apache community. Sponsors: Image by WinbondIndia targeted for 24,000 new MW of renewable energy capacity per year India will add 24,000 megawatts (MW) of renewable energy capacity every year from next year, meeting the target set by its new federal environment ministry. This is the first time India has put a target of this magnitude on the ambitious wind, solar, biogas, and small hydro projects that it wants to build to propel its economy into the 21st century. With only about 8,000MW of renewable power capacity currently under construction across the country, India is aiming to add three times as much capacity by 2022. India is also looking to build power generation capacity from renewable sources, even though it is heavily dependent on coal-fired power in the form of hydel and thermal, the burning of which emits carbon into the atmosphere. The Indian ministry will miss this target, according to figures that the government will use to prepare for this year's budget. The new sources were to have been spread over 46,000MW of wind, 2,000MW of solar, 5,000MW of small hydro projects and 1,000MW of biogas plants. India's new environment minister will announce the scheme in his budget speech in the last week of May. The costs of renewable energy are higher than those for conventional power, but are falling. A series of auctions in different states in March saw wind and solar power prices plunge to less than half their previous levels. These bids were in the process of being given the required certificates for power purchase agreements. Government figures suggest about 4,000MW of new power will be provided through these auctions, with the rest to come 6a5afdab4c

This blog provides readers with life hacks and productivity tips that have worked for the founders of this blog, and could work for you.Q: how to join a new column with a new column name if name is same i have two dataframe and i want to join them and add a column named'score' and calculate on the same line. df1 contains region s1 s2 1 0.5 0.0 2 1.0 0.0 3 1.0 1 1 df2 contains region s1 s2 1 0.9 0.1 0.0 2 1.0 0.2 0.1 3 1.0 1.0 i want to join the dataframe and add new column and fill the values when same name found in region then add the value of s1\*0.9 if same region added with a new column then find the value of s2 and multiply it with 0.1 df1 new df region score 1 0.9 s1 \* 0.9 2 1.0 s2 \* 0.1 3 1.0 s1 \* 0.9 A: You can try (df1.set\_index('region')[s1]\*0.9 + df2.set\_index('region')[s2]\*0.1).reset\_index() region s1 s2 score 0 1 0.50 0.00 1.00 1 2 1.00 0.10 1.10 2 3 1.00

## What's New In CommitMonitor?

=====  
CommitMonitor is a lightweight software application whose purpose is to help you monitor Apache Subversion repositories for new commits. It comes in handy in case you have multiple repositories under a VNParentPath with the SVNListParentPath directive activated in Apache, as the tool is able to automatically detect commits to one or more of the repositories and shows popup notifications. Intuitive layout The tool adopts clean and user-friendly looks with all its features neatly organized in the main window. The projects that you monitor are revealed in an Explorer-like layout so you can easily browse throughout them. Additionally, you can check the projects, edit or remove them, mark all notifications as read, apply filters, and show commits from ignored users. The app runs quietly in the system tray without interfering with your work. Adding a new project for monitoring CommitMonitor gives you the possibility to add a new project to the list by specifying the name, selecting the source control, as well as adding the URL to monitor. What's more, you can make the application automatically perform checks at a user-defined time (in minutes), enter the authentication parameters (username and password), specify the maximum number of log entries to keep, and create exclusion and inclusion lists with users. Last but not least, you can ignore commits based on a log message, add a script/command to call when new revisions are detected, insert a URL for web-based viewer and disable the execution process if ignored commits are detected. Configuration settings CommitMonitor can be run at Windows startup, and you can ignore EOLs and whitespace changes, show or hide popup notifications, play sound notifications (you may opt for a preset one or add a custom audio file from your computer), enter the number of log messages to fetch for new projects, and disable the execution process if ignored commits are detected. Bottom line To sum things up, CommitMonitor proves to be a handy tool that offers a straightforward solution for helping you monitor Apache Subversion repositories for new commits. Thanks to its intuitive GUI, it can be mastered by rookies and professionals alike. There's also a portable edition available for download in case you want to skip the installation process. AppNuke.com is building a special place to store and share application reviews. Submit your apps to win prizes and get more exposure. Generally, the COSTex project has focused on the study of how gene expression is controlled by regulatory proteins. It is well
