Specification: Versions: Size: 3.5 MB Language: English Number of holidays: ... Free Version: Media: Unknown Author: Suggested Retail Price: Retail Price: Outline Ariel is a browser extension for Google Chrome and Firefox. Its purpose is to organize and categorize web pages in the browser. The tool is a result of a collaboration between two developers, Mark Follicle and Navid Shaban. It was released on June 22, 2013. Features Organization: Outline divides a webpage into sections that are called "categories", which organize web pages into a single page that allows users to quickly navigate between related pages. An outline of a page is formatted like a tree. Collapsible Outline: Ariel allows users to collapse the outline and see only the areas they are interested in by clicking the collapse icon in the top right corner of the outline. Clear as a Page: Ariel replaces the default browser toolbars that are used to navigate and view web pages. Clear as a Page has no sidebars, buttons, or search fields. It is not necessary to open a tab before using it. Integrated Reader: The section with the icon "Reader" contains the page's content, made available for a click. The reader includes: Full Page: Full page view of the page. This mode opens the page in a new browser window. Page Reader: Page view of the page. This mode collapses content into one or more web links. Tab: All pages that are linked to the page are displayed in tabs. Each tab can be expanded and collapsed to view other pages. Built-in Linking: A user can view all pages that are linked to the current page, by clicking the "Link" icon in the top right corner of the page. History: Ariel lets users save the pages they view in History,
