The keyboard macro recorder, or key macro, is a kind of record and play system. It allows you to record the sequence of keys you press, and then play the macro to repeat the specified sequence. You can create key macros for many purposes, but for those who are building custom keyboards, the tools to build macros can be even more useful. With key macros, you can do a lot of things like enter or exit programs, open files, search through lists, or even create your own macros. The key macro recorder will record the keys and save the sequence of keys into an.lkm file. It uses the.lkm format because it can be read by many applications. The keyboard macro recorder is not a standalone application. Instead, it is a part of the Windows Help and Support system. The Help and Support system is part of every Windows installation. It allows you to get help and support by using an online service. You can access the Help and Support service by opening a web browser, and searching for "Windows help and support." You will then be asked to log on to the website. When you log on, you will be greeted with the front page of the Help and Support website. The Help and Support website has many areas. For the keyboard macro recorder, you will find a section for keyboard macro settings. When you start the keyboard macro recorder, you will be taken to the menu by the keyboard macro settings. If you are creating a macro for a keyboard, this menu gives you many options. The first option in this menu is the "Keyboard macro" option. When you select the "Keyboard macro" option, the keyboard macro recorder will display a window with a series of options. The first option you should choose is the "New keyboard macro." This is the most important option for building your keyboard macro. If you choose this option, the keyboard macro recorder will start to record the keys you press. The recorder will start in a default setting. By default, the recorder will start to record all the keys you press. The recorder will stop when you press a specified key. The key you press will appear in the text box. When you are finished recording your keyboard macro, you should choose the "Save keyboard macro" option. This option will save the keyboard macro to the directory that you specified. If you choose this option, the keyboard macro recorder will display a window with 81e310abff

I am trying to use PyInstaller 3.1 on python 2.7.12 for an application and this error came up. Error Pyinstaller failed with distutils.errors.DistutilsPlatformError: C compiler [0] is not able to compile a simple C program. Expected Error Pyinstaller is installed on your system, but the compiler it uses is the old 'Visual C++ 6.0' compiler. The system is a Windows 7 Home premium. A: I was facing the same issue. I tried out different suggested solutions (osx-gcc, gcc, g++) on my python 2.7.12 and still not working. But one of the solution that worked for me was going to python install folder and removing gcc and config files. After this it worked for me. If you also tried other solution, I hope it helps!
