Color-luminosity lookup for shared colors or modified line styles: When you create color or line style attributes, you can designate a shared color or modify the line styles in any drawing, and the changes will automatically be applied to other drawings that you import or export. Color and line style contributions: Part of the Color control panel: the color and line style contributions feature, which enables you to apply a color or line style attribute to multiple blocks or objects, saving you time when you are working on a large drawing with hundreds of blocks or objects. Zoomed views: AutoCAD 2020 had an optional feature that, when activated, zeros the magnification factor on drawings so that you can more easily distinguish objects in your drawings. In this release of AutoCAD, there is a dedicated zoom tool bar to enable or disable the zooming feature. Layer Properties: From the Tools menu, choose Layer Properties or press L, and you can quickly view and edit the properties of your layers. Filtering of layer contents: It is now possible to view just the blocks, lines, or annotations you want to edit, instead of the entire drawing area. This makes it much easier to find what you are looking for. Filter by layer or block type: The Filter button is now an essential tool to quickly view the blocks in your drawing. You can filter by layers or blocks, for example, to see only lines or blocks that have been assigned to a specific layer or block type. Filtering on tools: In AutoCAD 2023, you can filter on tools that are visible in the viewport, which allows you to quickly find the tools you want to use. (Filtering on tools will be automatically enabled for certain commands, such as blocks, in the upcoming release of AutoCAD.) Global menu: The Global menu contains a number of new features, including Commands, Layers, Graphics, Modify, Nodes, and Properties. Viewport ribbon: A new ribbon to control the drawing and snapping settings is now in the Viewport. To access it, choose Viewport Ribbon from the View menu.
