The WN722N has an interesting feature in hardware that makes it easy to switch ports on the adapter between laptop and desktop. The USB2 interface to the card has four different ports that can be switched to any of three adapters on the card. For laptops this is very handy because it allows the device to be plugged into the USB port on the adapter but to have a wired connection directly to your laptop. Of course this means that you can switch at the cable level between laptop and desktop modes of operation. Connect the WN722N to your laptop and use the main LAN port on the adapter to get a connection. Put the WN722N into the desktop mode by unplugging one of the adapters and plugging the laptop adapter into the adapter's LAN port.

The WN722N will now connect to your desktop via the WN 3da54e8ca3
