More information is available from the Vista Drive Status About page. The official Vista Drive Status website: The author of Vista Drive Status: grafithomme After some time I needed to change my display monitor, but during that moment the panel of my motherboard was occupied with some garbage information. I was able to eliminate this data with no worries, but the system was not stable and there were several alert messages about hardware changes and other errors. The motherboard is a Kaby Lake Intel i5, but the BIOS of the motherboard is really old (from 2009). The software that came with the motherboard also requires the OS to be installed in Legacy BIOS mode. So, I installed Windows 10 in Legacy mode (BIOS mode) and I found that all my old software (including a couple of games) were not compatible. Thus, I decided to reinstall the whole thing from scratch. The installation was successful, but after a while I received an alert message about the hardware changes that should be done. In order to not get this message again, I ran the registry cleaner, deleted the entries that could cause problems, rebooted and the error message was no more. Just one thing to be noted is that the warning on the motherboard is not always shown. In the case of the motherboard I had the alert window, but the first boot after installation was successful and no warning appeared again. A similar problem happened with my desktop. The motherboard is a Gigabyte GAMING X570 and I installed Windows 10 in Legacy BIOS mode. After the first boot I received a
