What's New In?

ROTIPass: Itâs a clone of the original Password Protect program from the 80s. It allows you to protect directories and files of your choice with random passwords. A password for the protected directories and files can be set in the GUI. Rotipass supports all the features you can expect from an authentic 80s program. Rotipass is highly customizable and it can be used for so many different purposes. The main focus is to help you to protect your data and your computer. Because the main purpose of this software is to help you secure your PC and protect your data, everything is about the feature set which is provided by the program. You can choose between those features as you wish. However, if you want to have a look at some of the main features you can use the table below. It lists a list of all features and their functionality. File-Based Encryption It provides a powerful file encryption. So the passwords of the selected files can be set. Rotipass can encrypt files with strong encryption algorithms like RSA (Rivest Shamir Adleman), IDEA (International Data Encryption Algorithm) and DES (Data Encryption Standard). Support for Microsoft Windows, Linux, Mac OS X and other Operating Systems Rotipass works on all operating systems. You can use it in any Microsoft Windows version from Windows XP to Windows 10. It has been successfully tested on Windows 7 and 8.1, and it works on Windows Server 2008 and 2012. You can use it on Linux using both GNOME and KDE desktop environments. It works on Mac OS X 10.5 and later. Protect any and all files When the âfilesâ option is chosen in the context menu you can encrypt any and all files. Files can be encrypted individually or by selecting multiple files. Protect directories You can protect directories using the âdirectoriesâ option in the context menu. This allows you to restrict access for each of the selected directories. So users can not access any of the protected directories without knowing the correct password. Hide all files When the âhideâ option is selected in the context menu, you can hide all of the selected files. The only way to see the files is by using the file encryption feature. Users can use the program in the same way as they use any other file encrypting program. Hide all but selected files When the âhideâ option is selected in the context menu, you can protect all of the files, except the selected ones. Again, you can use the program in the same way as you use any other file encrypting program. Hide all except selected files When the âhideâ�
