What's New In Word2CHM?

Word2CHM is a simple Windows application. This is a tool for converting MS Word documents to HTML Help Workshop Help file format. Word2CHM is a command-line program that can be run from the command line or any text editor. As with most command-line tools, the program also creates an 'inline help' for the command it runs, which shows how to use the command. Word2CHM is freely available on the Internet. The word2html converter is a portable Java based program. It can convert MS Word documents to HTML format. Features: Word2CHM can convert MS Word documents into HTML Help Workshop files that you can open in a web browser. Word2CHM also supports optional header and footer for your HTML Help files. Usage: * Place the Word2CHM.exe application in the same directory as the Word document to be converted, and then run it from the command line. * Word2CHM will open the Word document, navigate to the first text frame, and then convert the text. The user must then select the appropriate format for the Help file. The output file is saved as a file with the file extension 'hhp'. * To convert a document with a newline in it, you may be required to run the application several times. Notes: * Word2CHM requires Microsoft Word 2003 or later, and a working installation of the MS Help Workshop (Help Workshop 2007 and later are required). * The default header and footer used by the application are 'Table of Contents' and 'Document title' respectively. Versions: * Word2CHM is available in source code on the Internet, and can be downloaded for free.
