We'll see when it arrives...soon, we hope! a great friend came by and brought Mandy Moore with her... So, hey, it's about Time! For those of you who don't live under a rock, it's pretty funny to read about how quickly this was discovered to be a hoax. We've covered the story here. So, we're getting somewhere! But look a little closer and there are the words, "I'm inside! I'm inside!". The description is still vague, but not as vague as it once was. Mandy Moore has been "added as a special guest star in the film," she's in the music video, she's starring in a brand new fashion line (no details there yet), and she's "staging a comeback." We can't wait to see what the next few days bring! Update: A couple more than bff6bb2d33

During the manufacture of aircraft, the wheels are first produced in larger sizes and then are reduced to a smaller size, usually for installation in an aircraft. The wheels are mounted on the aircraft by the manufacturer as a unit. In order to remove the wheels from the aircraft and replace the wheels on an aircraft, the ferrous metal rim of the wheel is permanently attached to the aircraft by a plurality of rivets which penetrate through a flange of the wheel and into the aircraft. A plane, called a pillow, is attached over each of the rivets so that when the wheel is removed from the aircraft, the rivets are either severed or the pillow is removed. Removal of the rivets, or removal of the pillow, is difficult because the rims are held against movement by the rivets. The removal of the rivets is especially difficult since many aircraft rims are not fastened to the aircraft by the rivets, but rather are attached to the aircraft by a nut which penetrates through the flange of the wheel rim. Tools for removing a wheel from an aircraft are known. Such tools may be spring-loaded so that when the tool is pressed against a wheel assembly, the tool will disengage itself from the wheel assembly. This type of tool usually is limited in its ability to forcibly pry the wheel assembly out of the aircraft flange. Accordingly, such tools usually have no capability of enlarging the area of a wheel assembly to facilitate the prying action of the tool. Tools of this type are disclosed in U.S. Pat. No. 4,144,979 and Canadian patent No. 478,947. Other prior art tools are known which
