Books.. in the selection of authors and manuscripts for publication.--- abstract: 'We propose a new technique based on superconducting quantum interference devices (SQUIDs) to measure the spectra of quantum nanomagnets. These measurements are made possible by the increase in the scale of the magnetic flux standards offered by the SQUIDs. The approach takes advantage of the relationship between the magnetic flux threading a nanomagnet and the supercurrent induced in it by the spin-orbit interaction. We then develop a formalism that allows one to model the SQUID-SQUID interactions, namely the phenomena known as supercurrent cross-talks. The idea of the approach is then used to estimate and cancel the spurious effects introduced by the cross-talks by a proper alignment of the SQUIDs.' address: - | Physics Department, CINVESTAV, Mexico City, Mexico\ codemag@cinvestav.mx - | Physics Department, Tecnologico de Monterrey, Mexico\ elmerguez@cinvestav.mx - | Physics Department, UNAM, Mexico\ sblzis@gmail.com - | Institute for Advance Studies in P.
