It provides getters and setters for various properties. Some of these properties are created in factory methods which are marked as final. I have to overload these method in a subclass of this class. For instance: myClass.StringProperty = "Some String"; //Cannot add the "StringProperty" setter since it is a final method in //a superclass. //Something like: mySubclass.overloadSetter("StringProperty", this.StringProperty,...); Is there a way I can figure out what factory method is actually being called in my overloaded setter? 595f342e71
