Hershey's is launching a new limited edition holiday collection of merchandise this year, including chocolates in a variety of shapes, flavors, and colors. The new Hershey's Candy Challenge collection comes with the tagline: "Eat More Chocolate During the Holidays." Although sales of chocolates typically decline during the holiday season, Hershey's is pointing out that this year's drop should be smaller than in previous years. This year's chocolates include some special flavors. Some Hershey's Chocolate Bars are being made with Dark Chocolate Cacao and Caramel Flavor. Hershey's Cookies are being made with Dark Chocolate Cacao, Milk Chocolate, White Chocolate Cacao, and Caramel Flavor. Milk Chocolate Cacao and Caramel Flavor Hershey's Kisses are being sold for the first time. Hershey's put a variety of different flavors together in one container. For instance, a single bar is being made to contain Dark Chocolate Cacao, Milk Chocolate Cacao, White Chocolate Cacao, and Caramel Flavor. Hershey's Chocolate Bars are being made in Raspberry, Pumpkin, Caramel Apple, Milk Chocolate Caramel Cacao, Orange, and Banana flavors. And Hers

Up until a few weeks ago, I had been holding off on ordering a couple of subjects for a very big assignment at work. I kind of wanted to do a little bit of work on my lessonplan, as well as get some practice planning for the upcoming field trip. I started planning for the field trip last week, and had plans of having a field trip series this week, then a 2-day unit of study to start the following week. As I've gotten more and more into

I'm trying to show that $2^{2^n} \equiv 1 \pmod{3}$. So far I have that $2^{2^n} \equiv 1 \pmod{2}$ and $2^{2^n} \equiv 2 \pmod{4}$. I also know that $2^{2^m} \equiv 1 \pmod{3}$ if and only if $2^{2^m} \equiv 2^{2^n} \pmod{3}$. Now I'm thinking of using this but I'm not sure how I can show that $2^{2^n} \equiv 1 \pmod{3}$. A: This is a good point to use the Chinese Remainder Theorem. Let $\alpha=2^{2^n}$. Then $2^{2^n} \equiv 1 \pmod{2}$, so you can write $\alpha=2^{2^n} \equiv 2 \pmod{4}$, as you have already shown. We want to show that $\alpha \equiv 1 \pmod{3}$. (Again, as you have already shown, if this is true, then all other powers of 2 are also congruent to $1 \pmod{3}$.) We have two ideals 2^n , 3^n
