I am using this library to play a wav sound for my android application. My problem is the sound is played correctly BUT it is not in the right format, it looks like I have a lot of silence when I play the sound. So my question is how can I fix that? A: The default sound format is not really suitable for mobile phones. The sound should be compressed. The size of your sound is not that large but it cannot fit on a phone. The maximum allowed size of a sound is 30MB. A good recommendation for the bit rate is 24 to 32 kbit/s Try to set the sound format to something more suitable, like one of these: // Options for a WAV sound file. See class WAVE for more details. AudioFormat inputFormat = AudioFormat.ENCODING_PCM_16BIT; AudioFormat outputFormat = AudioFormat.ENCODING_PCM_16BIT; // AudioFormat for WAV format AudioFormat inputFormat_wav = AudioFormat.ENCODING_PCM_16BIT; AudioFormat outputFormat_wav = AudioFormat.ENCODING_PCM_16BIT; [Double-lumen central venous catheter-related bloodstream infection due to gram-negative rods]. A 69-year-old woman with hemodialysis (HD) for chronic renal failure was admitted to our hospital with shock. She had been treated with an 8-French, two-lumen central venous catheter (CVC) for 4 weeks and had no insertion site infection before removal. Blood cultures showed gram-positive cocci. We detected methicillin-resistant Staphylococcus aureus in one of the blood cultures, and her central venous catheter was exchanged for a subclavian vein. Echocardiography showed no evidence of catheter-related infection. In the culture of her second central venous catheter after the exchange, gram-negative rods were detected in only one blood culture. As gram
